Monitor Water

Sensor info

No Data Available
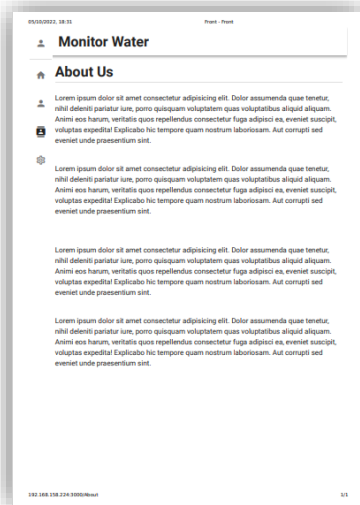

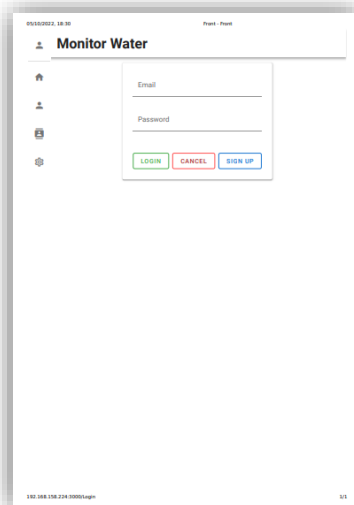

Sensor Information

A sensor is a device that detects and responds to some type of input from the physical environment.

This is where the data collected by the sensor from the plants will be displayed.

About Us

This is where you will find general information about our organisation/ team members and why we have created this website. This will also show our Goal and Mission.

The primary purpose of this page is to inform the user about the website and its operations and will also incorporate contact information.

This page will serve as a marketing tool for our business, enticing potential customers with both the history and the aspirations of our business.
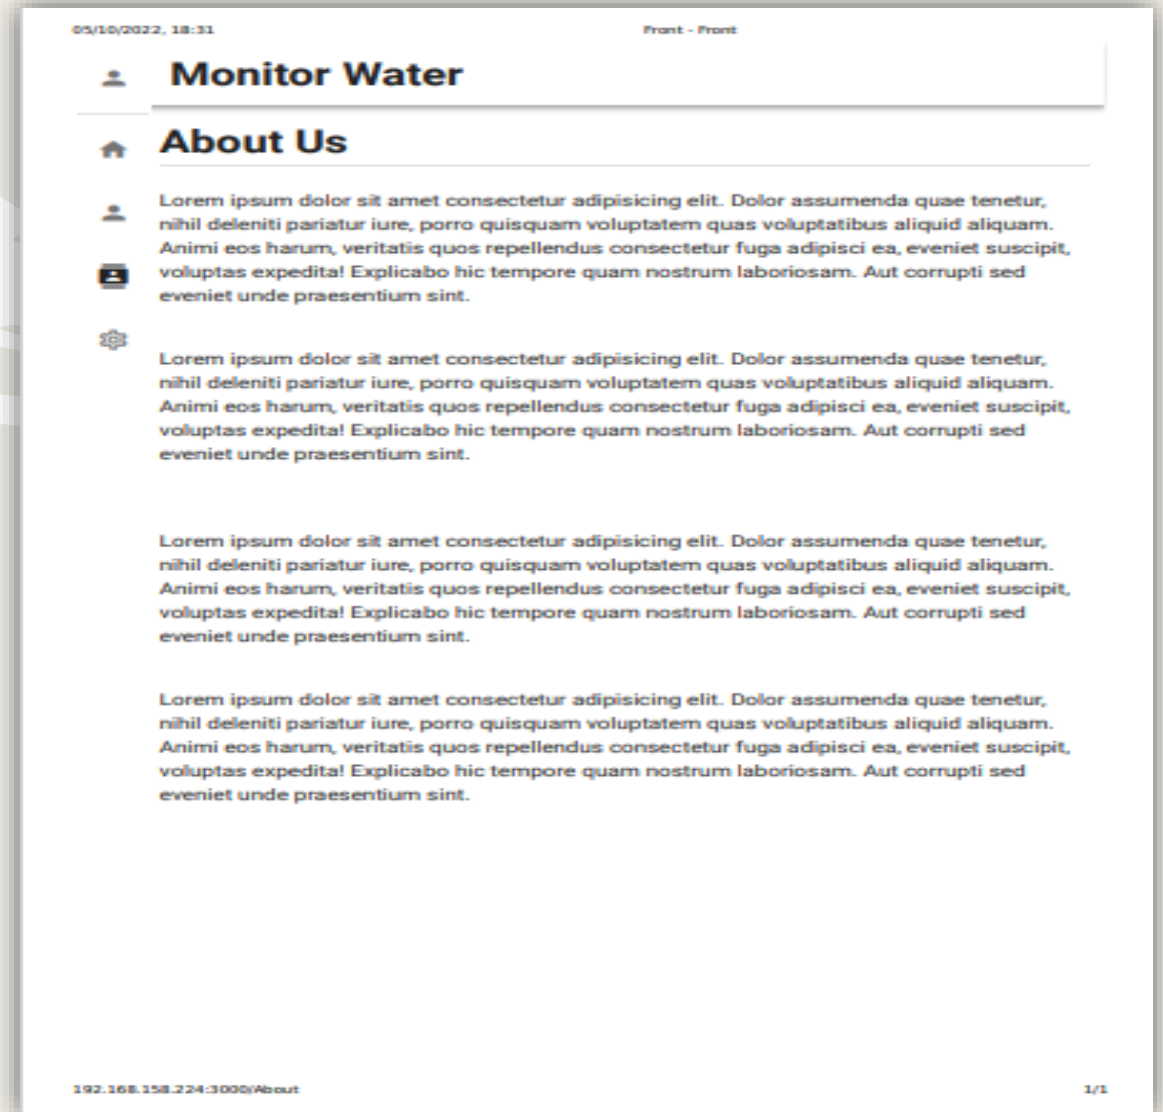

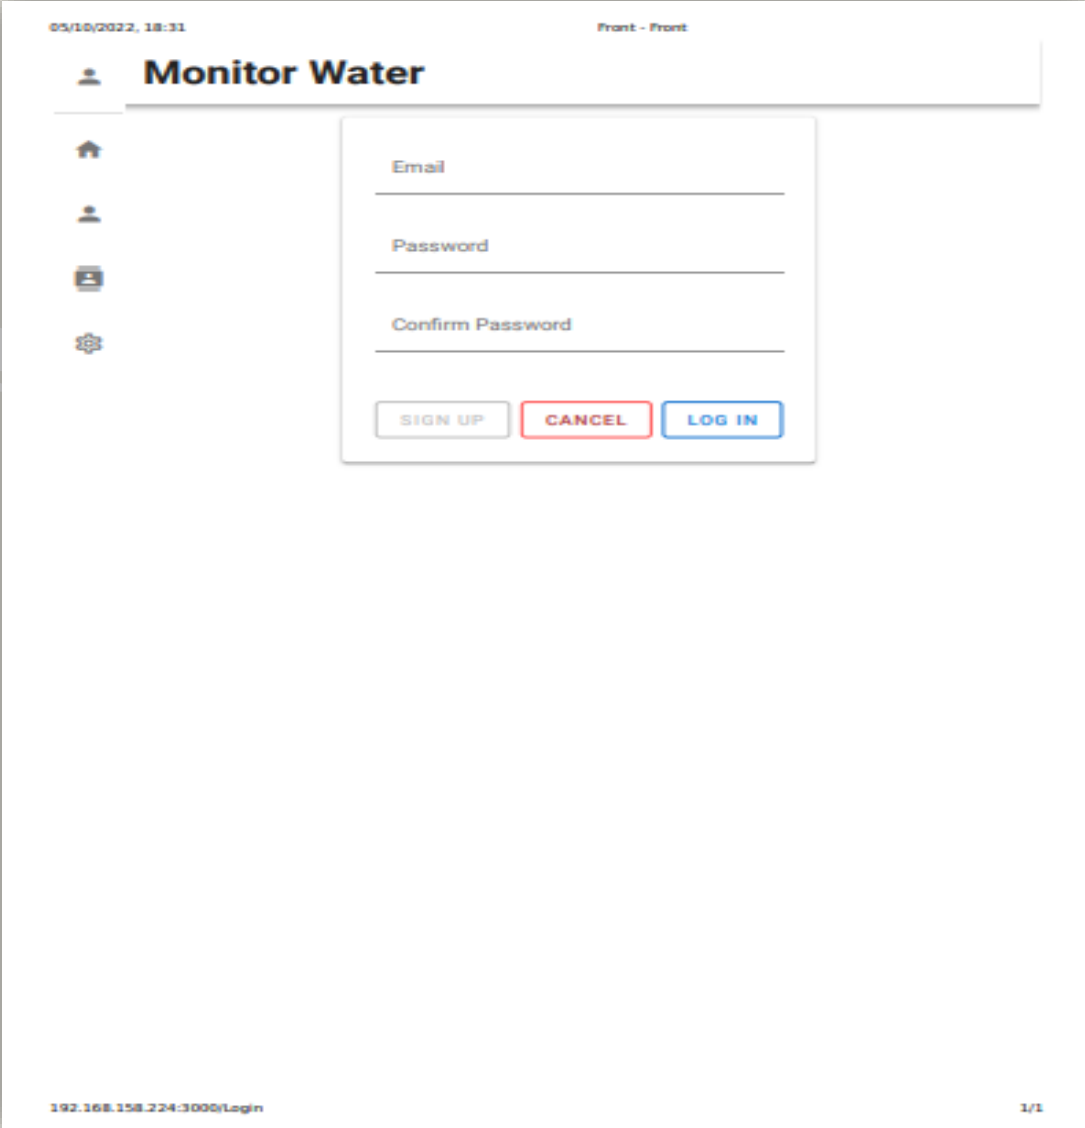

Sign In

When you sign in, it means that's you as a user, is identified and authenticated to access the website because you have already registered.

By logging in what you simply do is authenticating yourself to gain access to the website. It is just an action which identifies you as a returning user rather than seeing you as a new user, in which case you will have to sign up.
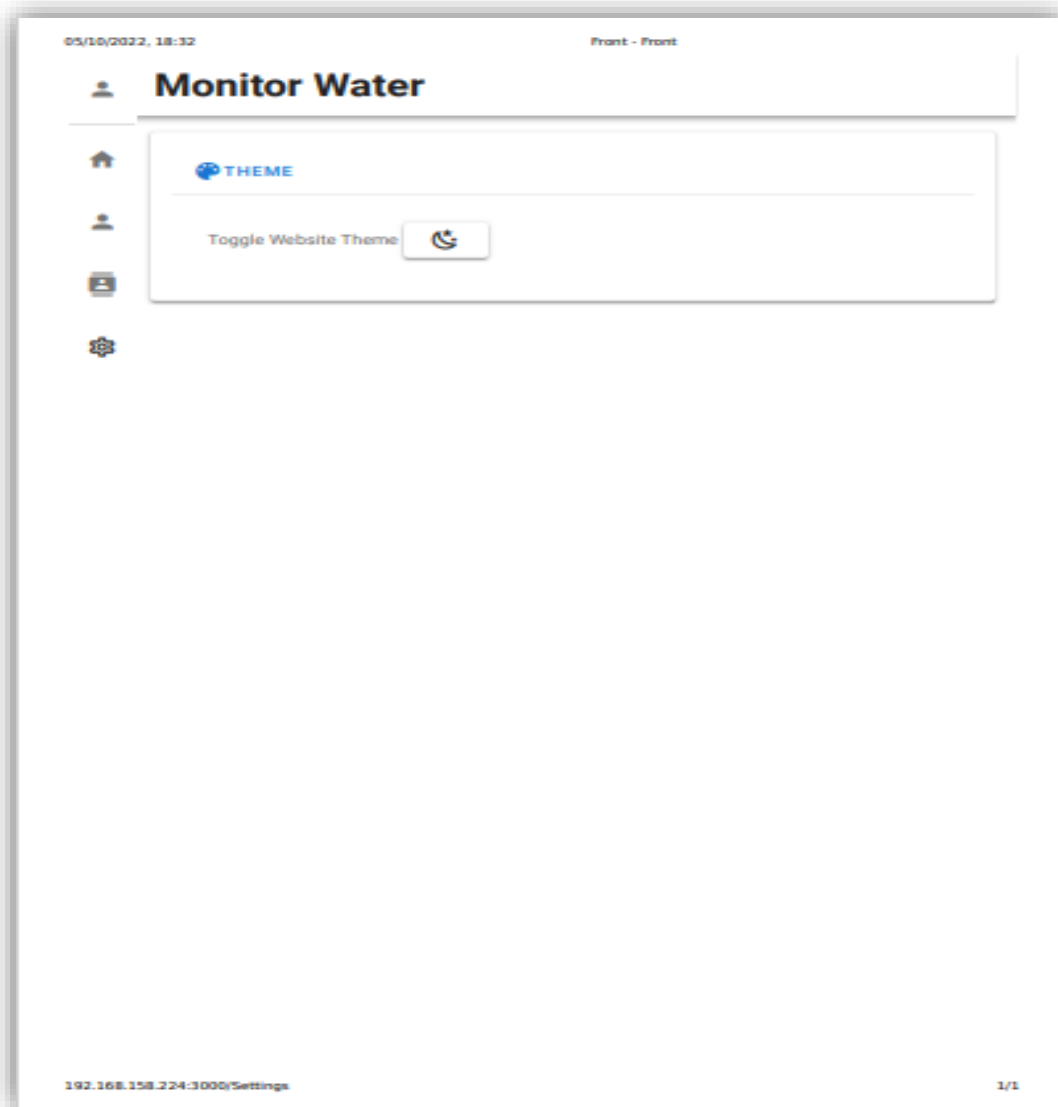

<u>*Sign Up*</u>

You need to sign up before you can access the website which requires you to fill your details which are <u>email ID</u> and a <u>password</u> to log in. If you are not a registered user already, you are always required to register.

When you sign up for something, you register yourself as a new user. This is where, as the new user you register/create a new account.

🎨 THEME

Toggle Website Theme 🌙

Theme Setting

A theme is the foundation for the complete design of a website. On our website this setting allows the user to choose between light and dark mode.

Dark mode's aim is to reduce the glaring white light that may be distracting in the evenings. It may even be easier on your eyes than a traditional screen setting. This reduces eye strain at night and cuts glare.
